

SNDT Women's University, Mumbai

Master of Science (Home Science- Nutrition and Food Processing)

MSc (HSc- NFP)

as per NEP-2020

Syllabus

(2023-24)

Moneranan This 2024

Programme Degree		M.Sc.
Specialization		(Home Science- Nutrition and Food Processing)
Preamble		The Postgraduate Programme in Nutrition and Food Processing focuses on food science research and its applications, providing an understanding of the various technological advancement with reference to food industry. The Programme builds on strong foundations in food science and nutrition to provide research insight into applied elements of food chemistry, processing technologies, creative product development, food safety and quality. It also provides students with the opportunity to explore entrepreneurship through industrial relationships.
Programme Specific		After completing this programme, Learner will -
Outcomes (POS)	1.	Develop capacities in the areas of Food Science and chemistry, Food Safety and Quality, Food Processing, Human Nutrition and Food Product Development.
		Become professionals in these and related areas, who can work effectively and efficiently in academics, research, food industry, training, extension and community service.
	3.	Develop abilities to pursue higher education and research in Food Science, Nutrition and Food Processing.
i ang si setyaith na siste participante na s		Participate effectively as responsible and ethical professionals who can contribute substantially to national development and improve quality of life of citizens.
Eligibility Criteria for the Programme		 A) Students who have a minimum 50% or B Grade in an Undergraduate program with degree in B.Sc. Food Science and Quality Control, Food Science and Nutrition, Foods and Nutrition, Clinical Nutrition and Dietetics, Nutrition and Dietetics, Public Health and Nutrition, Applied Nutrition, B.Sc. Home Science (Hon. with Food Science and Nutrition/Food Technology). B) Students who have a minimum 60% or A Grade in Undergraduate program with degree in B.Sc. or B. Voc. in Food Technology/ Food Processing, Post-Harvest Technology, B. Tech (Food), Food Technology and Management, Microbiology, Biotechnology.
Intake (For SNDT WU Departments and Conducted Colleges)		30+30

Year II MSc (Home Science- Nutrition and Food Processing)

Exit with MSc (Home Science- Nutrition & Food Processing)

Major (elective) subjects will be offered only if there are minimum 10 students for the respective course.

Chemederal 5/1/2024

Syllabus Contents

Semester I

1.1Major (Core)

Course Title	Introduction to Food Biochemistry	
Course Credits	4	
Course	After going through the course, learners will be able to	
outcomes	 Elaborate on both basic and applied biochemistry related to food science and technology 	
	2. Elaborate and apply the specific food biochemical concepts	
	3. Elaborate on the fundamentals of cell.	
	4. Elaborate the basic functions of food constituents with the chemistry perspective.	
	5. Explore the various factors that affect the chemical and physical changes of food components during processing and storage condition.	
Module 1 (Cre	dit 1)	
Learning Outcomes	After learning the module, learners will be able to	
	1. Elaborate on basic biochemistry and cellular components	
	2. Analyze and elaborate on cell structure and function	
	3. Elaborate on enzyme activity in food processing	
Content Outline	 Cell structure: Membrane structure, cell organelles, and transport of metabolites across membranes Enzymes Enzyme specificity, regulation of enzyme activity, and inhibition Enzyme Classification and Nomenclature Biocatalysis Enzyme Activities Enzymes in Food Processing Protein Cross-linking in Food – Structure, Applications, Chymosin in Cheese Making 	
Module 2 (Cre	dit 1)	

Learning Outcomes	After learning the module, learners will be able to		
	 Elaborate on the biochemical principles in fruit and vegetable processing 		
Content Outline	 Biochemistry of Fruits Biochemistry of Vegetable Processing Starch synthesis in the roots and tubers Non-Enzymatic Browning in Cookies, Crackers and Breakfast Cereals Bakery and Cereal Products Biochemistry of Beer Fermentation 		
Module 3 (Cre	dit 1)		
Learning Outcomes	After learning the module, learners will be able to		
	1. Elaborate on the biochemistry behind processing of milk		
	 Identify natural food pigments and effect of processing on pigments 		
Content Outline	 Biochemistry and Probiotics Biological Activities and Production of Marine-Derived Peptides Natural Food Pigments Dairy Products Chemistry and Biochemistry of Milk Constituents Biochemistry of Milk Processing Equid Milk: Chemistry, Biochemistry and Processing 		
Module 4 (Cre	dit 1)		
Learning Outcomes	After learning the module, learners will be able to		
	1. Elaborate on the processing and the biochemical changes in processing of meat and poultry.		
	2. Apply the knowledge of processing and the biochemical changes in processing of sea foods		
Content Outline	 Biochemistry of Raw Meat and Poultry Biochemistry of Processing Meat and Poultry Biochemistry of Fermented Meat Biochemistry of Seafood Processing 		

Assignments towards Comprehensive Continuous Evaluation (CCE):

- Poster making related to the biochemical processes.
- Diagrammatic representation of Processes with reference to specific products.

1.2 M	ajor	(Core)
-------	------	--------

Course Title	Food Science and Chemistry
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Elaborate and discuss the food composition, properties, and significance of various food constituents.
	2. Identify changes occurring in various food stuffs after harvest, during storage and transportation, as a result of processing and cooking.
	3. Apply this knowledge for food product development.
Module 1 (C	redit 1)
Learning	After learning the module, learners will be able to

Outcomes	1. Analyze and discuss water activity and its role in food chemistry
	2. Identify and elaborate on the structure of carbohydrate, its types and role in food industry
Content Outline	 Water, Ice and Food Dispersions- Structure and properties of water and ice Types of water, solutions, and colligative properties Water activity and Food spoilage, Sorption phenomena Phase transition of foods containing water Relation between viscosity and temperature, WLF equation Water - solute interactions Heat transfer during processing Colloidal salts, stabilization of colloidal systems, Rheology of food dispersions Gels: Structure, formation, strength, types and permanence Foams: Structure, formation and stabilization Carbohydrates- Polysaccharides, sugars and sweeteners Reactions of mono and oligosaccharides Use of Polysaccharides in foods: Non-starch Polysaccharides Cellulose, hemicelluloses, pectins, gums (gum arabic, guar gum, xanthan gum), animal polysaccharides, agar, alginates, carageenan. Starch: Structure, Properties of amylose and amylopectin, effect of processing, gelatinization, methods for following gelatinization. Characteristics of some food starches. Effects of ingredients and conditions on gelatinization. Retrogradation Folysaccharide hydrolysis Modified food starches: mechanically damaged starches, extruded starches, pregelatinized, thin boiling starch, cross-linked starches, starch ethers and esters, oxidized starches Sugars and Sweeteners: Sugars, syrups, sugar alcohols, potent sweeteners, sugar products, Caramelization. Confectionery, chocolates, jams and jellies, synthetic and natural beverages
Module 2 (C	redit 1)
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on Amino acids, protein isolates, protein concentrates, peptides
	2. Identify and differntiate between types of enzymes and role of enzymes in food industry

3. Analyze the science behind meat, fish, egg, poultry and effect of cooking, processing and storage on pulses, meat, fish, poultry

Content Outline	 Chemistry of Amino acids, peptides, proteins and Science of Protein Foods-
outime	 a. Review of structure, physicochemical properties, functional properties of amino acids, peptides and proteins b. Chemical and enzymatic modifications- denaturation, non-enzymatic browning, and other chemical changes c. Processing induced physical, chemical and nutritional changes d. Texturized proteins e. Protein isolates, concentrates f. Protein hydrolysate,
	 2. Enzymes- a. Review of nomenclature, properties and isolation Nature of enzymes, stability and action. b. Factors influencing enzymes- enzyme inactivation and control c. Enzymes in food processing and modification- Proteolytic enzymes, oxidases, lipases, enzymes decomposing carbohydrates and applications d. Immobilised enzymes in food processing. e. Enzymes in waste management f. Enzymes and health/nutrition/food issues
	 3. Milk and Milk Products- a. Composition. Physical and functional properties. b. Denaturation c. Effects of processing and storage. d. Cultured milk, yogurt, butter, whey, cheese, concentrated and dried products, frozen desserts, dairy product substitutes.
	 4. Meat and Poultry- a. Muscle composition, characteristics and structure. b. Post mortem changes. c. Processing, preservation and their effects. Heat-induced changes in meat. d. Variables in meat preparation. Tenderizers. e. Meat Products.
	 5. Eggs- a. Structure and Composition. Changes during storage. b. Functional properties of eggs, use in cookery. c. Egg processing. d. Low cholesterol egg substitutes.
	 6. Fish and Sea Food- a. Types and Composition b. Storage and changes during storage. Changes during processing. c. By-products and newer products.
	 7. Pulses and Legumes- a. Structure, composition b. Processing. c. Toxic constituents.

Module 3 (Credit 1)			
Learning Outcomes	After learning the module, learners will be able to		
	1. Elaborate on the types of fat, uses, role and fat replacers		
	 Identify and Analyze properties of fats, fat deterioration, role of antioxidants, emulsions 		
	Identify use and types of flavours used in food processing, effect of processing on flavours and aromas		
Content Outline	 Lipids- Fats, Oils and related products- Review of nomenclature, classification, sources, composition, and properties Role of lipids in food flavour. Effects of processing on chemical structure and physical properties- Precursors of aroma compounds Functional properties of fat and uses in food preparations, interesterification of fats. Lipids exposed to frying conditions, hydrogenated fat and irradiated foods Lipid-protein complexes, emulsions: formation, stability, surfactants and emulsifiers Fat deterioration and antioxidants Fat substitutes Nuts and Oilseeds- Composition, Oil extraction and by-products Flavors- Individual aroma compounds- vegetable, fruit and spice/condiment flavors, flavors from lactic acid/ethanol fermentation, flavors volatiles from fats and oils, flavor volatiles in muscle foods and milk Composition, flavorings extracts – natural and synthetic Thermally induced process flavors Natural and synthetic flavors Interactions with other constituents 		
Module 4 (C	redit 1)		
Learning Outcomes	After learning the module, learners will be able to		
outcomes	1. Elaborate on the anatomy of vegetable and fruits, effect of cooking, processing, and storage.		
	2. Identify products made using fruits and vegetables, its processing and changes during preservation		
Content Outline	 Fruits, Vegetables and Processed Products Plant anatomy, gross composition, structural features and activities of living systems. Enzymes in fruits and vegetables. Flavour constituents. Plant phenolics. Pigments. Post harvest changes. Texture of fruits and vegetables. 		

d. Effects of storage, processing and preservation

- 2. Processed Foods:
- a. Squashes, Pickles, fruit/vegetable-based, vinegar, pickles.
- b. Beverages: Synthetic and natural, alcoholic and non-alcoholic,
- carbonated and non-carbonated, coffee, tea, cocoa. Malted drinks.
- c. Bakery products, dehydrated products.

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

- Debate on artificial sweetener consumption.
- Survey of different food items from different food groups.

1.3 Major (Core)

Course Title	Food Science (Pr.)	
Course Credits	4	
Course Outcomes	After going through the course, learners will be able to	
	1. Identify changes occurring in various foods as a result of processing and cooking.	
	2. Apply theoretical knowledge in various food preparations and product formulation	
Module 1 (Credit 1)	·	
Learning Outcomes	After learning the module, learners will be able to	
	1. Identify boiling and freezing point of water	
	2. Onserve and analyze effect of heat on sugar and starch	
Content Outline	1. Effect of solutes on boiling point and freezing point of water	
	2. Effect of types of water on characteristics of cooked vegetables, pulses and cereals.	
	3. Sugar and Jaggery Cookery- a. Relative sweetness, solubility and sizes of sugars, stages of sugar cookery, caramelization, crystallization, factors affecting crystal formation.	
	4. Starches, Vegetable gums and Cereals-	

 a. Microscopic examination of structure of starch from different sources. b. Dextrinization, gelatinization, retrogradation, thickening power. Factors affecting gels and gluten formation Starch hydrolysis, viscosity measurement.
 5. Jams and Jellies- a. Pectin content of fruits, role of acid, pectin and sugar in jam and jelly preparation. b. Use of gums as emulsifiers/stabilizers.

Module 2	(Credit 1)	
----------	------------	--

Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on fat cookery, role of fat and factor affecting fat absorption
	2. Identify and apply effect of cooking, heating, acid, salt, sugar, alkali, and enzymes on milk, preparation of milk products
	3. Discuss on pulses, Egg, meat, cookery. Identify the Role of egg as binding agent, emulsion, gelling agent, thickening agent, structure of egg and properties
Content Outline	 Fats and Oils- Flash point, melting point and smoking point. Role of fats and oils in cookery as: shortening agent, frying medium. Factors affecting fat absorption. Fat crystals. Plasticity of fats. Permanent and semi-permanent emulsions.
	 2. Milk and Milk Products: a. Scalding, denaturation. b. Effect of acid, salt, alkali, sugar, heat, enzymes, polyphenols on milk. Khoa, curd, paneer, cheese (ripened and unripened).
	 3. Eggs- a. Structure, assessing egg quality. b. Use of egg in cookery- Emulsions, air incorporation, thickening, binding, gelling. c. Method of egg cookery and effect of heat. d. Egg white foams and factors affecting foams.
	4. Pulses-a. Effect of various cooking and processing methods on various characteristics.b. Functional properties of pulses and their products.

	5. Meat and Poultry-
	a. Methods affecting tenderness of meat b. Effect of various ingredients and methods of cooking on colour, volume, texture, flavour, aroma and water holding capacity.
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Observe the effect of cooking on fish, vegetable, and fruits
	2. Identify types of leavening agent and elaborate on its role
Content Outline	1. Fish and Sea Food- a. Effects of different cooking methods on various fish and seafoods
	2. Gelatine- Gelation, gel strength and factors affecting gelation and ability to foam.
	 3. Fruits and Vegetables- a. Pigments: Effects of cooking, metal ions, pH on pigments. b. Effect of various cooking processes on different characteristics of vegetables. c. Prevention of enzymatic browning.
	4. Leavened Products-a. Leavening power of different leavening agentsb. Use of microorganisms (bacteria, lactic acid, yeast), steam, egg and, chemical leavening agents.
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Identify types of beverages and frozen foods,
	2. Experiment with emulsions, and observe surface tension
Content Outline	1. Beverages- Factors affecting quality of beverages.
	2. Frozen Desserts- a. Factors affecting ice crystal formation.

Г

	 Emulsions- Water-in-oil and oil-in-water. Surface tension- Measurement in hydrophilic and
	hydrophobic liquids and emulsions.
Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)	

- Application of different cooking methods for various commonly consumed recipes.
- Development of products using practical knowledge gained through modules.

1.3 Major

Course Title	Human Nutrition I
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	 Gain in-depth knowledge of the physiological and metabolic role of macronutrients, fat soluble vitamins and electrolytes and their importance in human nutrition.
	 Enable the understanding of basis of human nutritional requirements and recommendations through the life cycle and translate the knowledge into practical guidelines for dietary needs.
	 Familiarize with the recent advances in nutrition and apply this knowledge in planning for public health programmes.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Summarize the nutrient requirements in health.
	2. Elaboirate on the importance of body composition. Get acquainted with the methods for assessing the body composition
Content Outline	 Human Nutritional Requirements - Development and Recent Concepts. a. Methods of determining human nutrient needs b. Description of basic terms and concepts in relation to human nutritional requirements. c. Guidelines and Recommendations d. Development of International and National Nutritional requirements e. Translation of nutritional requirements into Dietary Guidelines
	2. Body Compositiona. Significance of body composition and changesthrough the life cycle.b. Methods for assessing body composition (both classical and recent) and their applications.

Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply the measurement of energy expenditure and regulation of energy metabolism
	2. Elaborate on regulation of metabolism and estimate energy requirements
Content Outline	 Energy Components of energy requirements: BMR, RMR, thermic effect of feeding, physical activity. Factors affecting energy requirements, methods of measuring energy expenditure. Estimating energy requirements of individuals and groups. Regulation of energy metabolism and body weight: Control of food intake – role of leptin and other hormones.
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Discuss on the physiology and metabolism of macro nutrients. Identify the role of Nutrients in gene expression.
	2. Identify the role of non-nutritive components of food in health and disease.
Content Outline	 Carbohydrates Review of nutritional significance of carbohydrates and changing trends in dietary intake of different types of carbohydrates and their implications Dietary fibre: Types, sources, role and mechanism of action Resistant starch, fructo-oligosaccharides, other oligosaccharides: Chemical composition and physiological significance Glycemic Index and glycemic load Carbohydrates and gene expression
	 a. Overview of role of muscle, liver and GI tract in protein metabolism b. Amino acid and peptide transporters

Module 4 (Credit 1)	 c. Therapeutic applications of specific amino acids d. Peptides of physiological significance e. Proteins, amino acids and gene expression
Learning Outcomes	After learning the module, learners will be able to 1. Elaborate on the nutritional significance of different fatty acids
	2. Gain knowledge and apply national and international dietary guidance in diets
Content Outline	 Lipids Nutritional significance of fatty acids – SFA, MUFA, PUFA- functions and deficiency a. Role of n-3 and n-6 fatty acids b. Prostaglandins c. Trans Fatty Acids d. Conjugated linoleic acid e. Nutritional Requirements and dietary guidelines (International and National) for visible and invisible fats in diets. Lipids and gene expression Water Physiological role of water in the body
 Assignments/Activities towards Comprehensive Continuous Evaluation (CCE) Poster making for role of Different macronutrients 	

• Changes in requirements across the lifespan

1.5.1 Major (Core)

Course Title	Public Health and Epidemiology
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Develop a holistic knowledge base and understanding of the nature of important nutritional problems and their prevention and control for the disadvantaged and upper socio-economic strata in society
	2. Identify the causes /determinants and consequences of nutritional problems in society
	3. Identify various nutrition and health interventions, programmes and policies.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on concept of public nutrition.
	2. Define Indicators of health and determine Health Status.
Content Outline	 Concept of public nutrition a. Relationship between health and nutrition

	b. Role of public nutritionists in the health care deliveryc. Sectors and Public Policies relevant to nutrition and health.
	 Primary Health Care of the Community a. National Health Care Delivery System b. Determinants of Health Status c. Indicators of Health
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on Population Dynamics and methods used for assessment of nutritional status
	2. Define and describe factors affecting food security
Content Outline	 Population Dynamics Demographic transition Population structure Fertility behaviour Population policy Fertility Inter-relationship between Nutrition and Quality of Life
	 2. Food and Nutrition Security a. Food production b. Access c. Distribution d. Availability e. Losses f. Consumption
	3. Food Securitya. Socio-cultural aspects and Dietary Patternsb. Their implications for Nutrition and Health
	 4. Nutritional Status a. Determinants of nutritional status of individual and populations b. Nutrition and Non-nutritional indicators c. Socio-cultural d. Biologic e. Environmental f. Economic
	 5. Assessment of nutritional status of individuals of different ages- a. MUAC, Wt. for age, Ht. for age, Wt. for Ht., Ponderal index, BMI b. Applications and limitations in different field

	situations- choice of an indicator
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on various nutritional problems and deficiencies.
	2. Identify National Policies and programmes.
Content Outline	 Major Nutritional Problems – etiology, prevalence, clinical manifestations, preventive and therapeutic measures for: Macro and micro nutrient deficiencies Other nutritional problems like lathyrism, dropsy, aflatoxicosis, alcoholism and fluorosis. Overweight, obesity, and chronic degenerative diseases National Food, Nutrition and Health Policies Infectious Diseases, prevention, and control- a. Aetiology of Chronic and Infectious Diseases Investigation of Outbreak Temporal and geographical trends of selected diseases
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Plan action programmes to combat nutritional problems.
	2. Develop strategies required to improve nutritional status.
Content Outline	 Plan of action and programmes Approaches and Strategies for improving nutritional status and health: Programmatic options- their advantages and demerits. Feasibility Political support Available resources (human, financial, infrastructural) Case studies of selected strategies and programmes: their rationale and context, how to

	 select interventions from a range of possible options: c. Health-based interventions, Food-based interventions including fortification and genetic improvement of foods, supplementary feeding, d. Nutrition education for behaviour change. e. Health economics and economics of malnutrition-Its impact on productivity and national development d. Cost-Benefit e. Cost effectiveness f. Cost efficiency
Accianments / Activities tow	ards Comprohensive Continuous Evaluation (CCE)

- Survey on different national policies made for benefit of public
- Posters/Visits to different sections of society to educate on various topics of concern.

1.5.2 Major

Course Title	Entrepreneurship development
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Acknowledge the concept of entrepreneurship.
	2. Acquire knowledge about the world of entrepreneurs
	3. Acquire and inculcate entrepreneurial values, attitudes, qualities and desires
Module 1 (Credit 1)	
Learning	After learning the module, learners will be able to
Outcomes	1. Identify the types of entrepreneurships.
	2. Identify and apply available techniques for opportunity development,
Content Outline	Introduction to Entrepreneurship: - Definition, Concept and Need for entrepreneurship Types of entrepreneurs: Spontaneous, Motivated and Induced Kinds of Entrepreneurship: Proprietary, Partnership and Group Entrepreneurship. Exploring the World of Entrepreneurs: - Legendary, Business, Social and Environmental, Artistic and Aesthetic Entrepreneurs - Entrepreneurs in Shadows, failed entrepreneurship - New Internet Entrepreneurs
Module 2 (Credit 1)	
Learning	After learning the module, learners will be able to
Outcomes	1. Examine elements of a successful business venture
	2. Apply the process of innovation
Content Outline	 Entrepreneurship development programme SWOT analysis Incubation, innovation and commercialisation of ideas
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Identify the benefits of women entrepreneurs to the society.
	2. Recognize the problems faced by women entrepreneurs.

Content Outline	 Women entrepreneurship Role and importance, problems faced by women Corporate entrepreneurship Role and mobility of entrepreneur
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Analyze the various schemes available
	2. Develop proposal for Government funding
Content Outline	 Government schemes, incentives for promotion of entrepreneurship Government schemes for MSME/SSI Export and import policies for food processing sector Venture capital Planning and evaluation of project Project feasibility and post planning and running of project
Assignments/Activities towards Comprehensive Continuous	

Evaluation (CCE)

- Develop unique products/items and organize their sale.
- Mock Sales pitch for funding for business venture.
- Organize a small exhibition/fair for fellow students/teachers.

1.6 Major (Core)

Course Title	Methods of Investigation- Research in foods (Pr.)
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Learn various modern instrumental techniques in food analysis.
	2.Identify the applications, strengths and limitations of different methods.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on the basic principles involved and applications of advanced techniques available for food analysis.
	2. Apply the principles of laboratory techniques and acquire proficiency in laboratory techniques.
Content Outline	 Colorimetry for estimation of nutrients Photometry- Flame photometry for estimation of nutrients Flourimetry- use in fresh and processed foods Spectrometric- methods for estimating food quality- a. UV and visible molecular absorption spectrometry. Atomic Absorption Spectrometry, Atomic Emission Spectrometry, ICP. Fluorescence Spectrometry Atomic Mass Spectrometry Infrared Spectrometry
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on the basic chromatographic techniques used in food analysis their principle.
	2. Apply chromatographic techniques to estimate various nutrients in foods.

Content Outline	 Chromatography for estimation of nutrients in food and detecting additives, pesticides, and contaminants in food Paper chromatography Ion Exchange Chromatography Thin Layer Chromatography Column Chromatography Gas Liquid Chromatography High performance liquid Chromatography Super critical fluid extraction Chromatography
Learning Outcomes	After learning the module, learners will be able to
	1. Gain knowledge of advanced analytical techniques and applications in food analysis.
	2. Elaborate and perform texture analysis of various food products.
Content Outline	 Electrophoresis for protein and mineral estimation in foods and Centrifugation method in milk industry Principles and applications in paper and gel electrophoresis Radiochemical Methods- Use of radio isotopes. Viscosity and Consistency-
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Identify the significance of calibration of instruments.
	2. Learn the possible errors and their control.
Content Outline	 Specific gravity, freezing point, melting point, refractive index of foods Gel strength of foods Brix, Densitometry, Refractometry, Polarimetry of sugar or confectionary Measurement of Colour in foods Relative Humidity and Water Activity of food Aeration / Overrun Measurement of milk products Calibration of Instruments, Basic Analytical Chemistry errors, Statistical analysis

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE):

- Continuous assessment and practical performance of practical conducted by the learner.
- Assessment of skills in using the equipements.

Bibliography:

Second Semester

Syllabus Contents

2.1 Major (Core)

214511	Basic Food Microbiology and Safety
Course Credits	4 (2+2)
Course Outcomes	After going through the course, learners will be able to -
	 Differentiate the role of micro-organisms in humans and environment.
	 Analyze the importance of micro-organisms in food spoilage and to learn advanced, techniques used in food preservation.
	3. Explore the recent procedures adopted in various food operations to prevent food- borne disorders and legal aspects involved in these areas.

Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Recognize the importance of food microbiology, spoilage,
	preservation & fermentation.
	2. Explore the factors affecting the survival & growth of
	micro-organisms.
Content Outline	 History, scope and importance of food microbiology Food spoilage, preservation, fermentation, QA/QC Micro-organisms and food: Their primary sources in foods, morphology, cultural characteristics and biochemical activities. Airborne bacteria, fungi Microorganisms found in soil Microorganisms in water Normal flora of skin, nose, throat, GI tract Factors affecting the survival and growth of microorganisms in food. Intrinsic and Extrinsic parameters that affect microbial growth. Intrinsic factors for growth- Generalized, nutrient effect, pH, buffer, anaerobic/aerobic conditions, moicture content tomporature gascous atmosphere
	- Implicit factors- properties of microorganisms-response
	Food Preservation and application to different types of foods: a. Physical methods – Drying, freeze-drying cold storage, heat treatments (pasteurization), TDT, TDP Irradiation (UV, microwave, ionization), high pressure processing, Aseptic packaging, modified atmosphere b. Chemical preservatives and Natural antimicrobial compounds. c. Biologically based preservation systems and Probiotic bacteria. Uses of Microorganisms: Fermented foods, (Yeast, lactobacillus)
	Fermented milk, Cheese, vegetables, beer, vinegar
Madula 2 (Cradit 1)	Genetically modified foods, marine foods.
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply various methods of microbial examinations.
	2. Assess the spoilage of different food groups.

Content Outline	Microbiological examination-Methods of Isolation and
	detection of microorganisms or their products in food.
	 Conventional methods Rapid methods (Newer techniques)
	- Immunological methods: Fluorescent, antibody, Radio
	immunoassay, ELISA etc.
	- Chemical methods: Thermostable nuclear, ATP measurement
	and PCR (Polymers chain reactions) - only principles in brief.
	Spoilage of different groups of foods:
	a. Cereal and cereal products
	b. Vegetables & fruits
	d Eags and poultry
	e. Fish and other seafoods
	f. Milk and milk products
	g. Canned food
Course Title	Basic Food Microbiology and Safety (Pr)
Course Credits	2
Course Outcomes	After going through the course, learners will be able to
	1. Prepare common laboratory media & special media for
	cultivation of micro-organisms.
	2.Carry out bacteriological analysis of food
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Isolate micro-organisms through laboratory process.
Content Outline	Preparation of common laboratory media and special media for
	cultivation of bacteria, yeast & molds.
	and flagellar staining. Motility of bacteria. Staining of yeast and
	molds.
	Cultivation and Identification of important molds and yeasts.
	(slides and mold culture).
	microorganisms in foods. Assessment of surface sanitation of
	food preparation units - swab and rinse techniques.
	Isolation of microorganisms: Different methods and maintenance
Module 4 (Crodit 1)	of cultures of microorganisms.

Learning Outcomes	After learning the module, learners will be able to
	1.Bacteriologically analyze different foods.
Content Outline	Bacteriological analysis of Foods : Both processed and unprocessed like vegetables and fruits, cereals, spices and canned foods, using conventional methods, yeast and mold count in foods. Bacteriological analysis of water and milk, Total count, MPN Coliform (Count) and MBRT, IMVIC etc.
Assignments/Activit	ies towards Comprehensive Continuous Evaluation (CCE):
 Undertake bacteriol 	logical analysis of food
• Undertake bacteriological analysis of 1000.	
 Survey of commercially available fermented food products. 	
 Presentation on spe 	ecific molds and yeasts.

Course Title	Principles of Food Preservation and Processing
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Know the principles of food preservation.
	 Identify and apply the principles of food processing techniques and apply the principles to specific food commodities.
	3. Know the principles of cleaning and sanitation.
	4. Be familiar with laws and regulations that govern the Food Industry.
	5. Be aware of current issues and trends in the Food Industry.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on the principles of food processing.
	2. Explore methods of food preservation and importance of water activity.
Content Outline	 Introduction to process operations General principles of food preservation Asepsis, removal of microorganisms Maintenance of anaerobic conditions
	2. Methods of food preservation
	 3. Water Activity and Food Preservation a. Free and Bound water b. Effect of water activity on quality of food constituents during storage (proteins, lipids, and carbohydrates) c. Effect on physical and nutritional quality d. Water activity and food stability e. Effect of packaging material on water activity

	 4. Preservation through temperature reduction a. Storage of food at chilling temperature behavior b. Refrigeration c. Controlled Atmosphere Storage (CAS) d. Modified Atmosphere Storage (MAS) e. Chilling defects f. Freezing -principles, fundamental aspects of freezing -Freezing process -technological aspects -Freezing damage - osmotic damage, solute damage - Structural damage
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on high temperature food processing techniques.
	2. Recognize the role of food additives in food preservation.
Content Outline	 Preservation by use of High Temperatures Concentration of food, Evaporation, Freeze concentration, Membrane process for concentration Drying or Dehydration of food (Food Preservation through water removal) Transport of water in foods Different methods of dehydration Cabinet drying, sun / solar drying Osmo drying, Osmo - vac drying, Freeze drying- Introduction, principle, processing, preservation Vacuum drying Quality aspects of dehydrated products Nutritional changes and recent advances Blanching, sterilization, pasteurization Food Additives: Natural food additives as preservatives Sugar Acidulants (citric acid, malic acid, tartaric acid, lactic acid, acetic acid Thickeners (modified starches and gums) Stabilizers Emulsifiers (GMS, soya) Colours (natural and synthetic)

	 g. Vitamins h. Minerals i. Salt, gases, spices, smokes, oils, vinegar - Chemical Preservatives a. Sorbic acid, its potassium salts b. Calcium and sodium propionates c. Sodium benzoates, parabens e. Antioxidants – functions, products and applications, regulatory status, trends, issues and developments 6. Enzymes - applications in fruit and vegetable processing, trends issues and developments
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on preservation of food using sugar, salt
	2. Discuss and apply tomato processing, fermentation technique, pickling
Content Outline	 Preservation using high Sugar, Product technology for- Jam, Jellies, Marmalade Squashes, syrups, cordials, concentrate etc. Intermediate moisture fruits (candies/ muramba's, tutti-frutti /glazed fruits) Processing and preservation of Tomato products-Tomato juice, Ketchup, Sauce, Paste, Soup, concentrate, puree, Chutneys and allied traditional products. Salted products-

Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on the preservation of fruits and vegetables using canning
	2. Elaborate on the preservation of foods using radiations
Content Outline	 Canning and bottling- a. Commercial canning operation, Containers used for canning, Machinery and equipment's used in processing b. Canning of vegetables and their products, Canning of fruits and their products (sweet corn, baby corn, pineapple slices, fruit juice, tomato pulp, strawberry, mushrooms) c. Home scale canning and bottling in standy pouches for vegetables, pulp, <i>gulab jamun</i>, dairy products. d. Spoilage of canned food and its quality evaluation Irradiation of food a. Principle, b. Quality / Technological aspects c. Commercial applications UV rays application in food industry Microwave technique, its application in food preservation (surface sterilization of food) Food Plant sanitation, waste management and disposal Environmental Aspects of Food Processing (Eco friendly) Roles and use of water in food processing
Assignments/Activities towards Comprehensive Continuous Evaluation	

- (CCE):
- Write a note on food preservation principles.
- Enlist various Food additives used in foods.
- Elaborate of types of dehydrators and its application.
- Project on the process of canning with example.
- Enlist fermented foods available in Indian market commercially.

2.3 Major (Core)

Course Title	Food Analysis and Quality Control (Practical)
Course Credits	(1+3)
Course Outcomes	After going through the course, learners will be able to-
	1. Recognize the importance of quality assurance in food industry.
	2. Carry out various tests and assess quality, using standards for
	quality assessment and food safety.
	3.Conduct various tests used to detect food adulterants.
Module 1 (Credit 0.5)
Learning Outcomes	After learning the module, learners will be able to -
_	1. execute quality assurance programmes.
Content Outline	Introduction to quality assurance and food safety. Current
	concepts of quality control.
	Quality Assurance Programme: Quality plan, documentation of
	records, product standards, product and purchase specifications,
	process control and HACCP, hygiene and housekeeping, corrective
	action, quality and programme and total quality process.
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Undertake Product analysis.
	2.Assess purity & quality of food additives & contaminants.
Content Outline	Product Evaluation:
	 Sampling for product evaluation and line control.
	 Statistical quality and process control
	• Specifications and food standards. International, National –
	Mandatory, Voluntary.
	Sample preparation
	 Reporting results and reliability of analysis.
	Assessment of purity and quality using appropriate standard tests
	and Detection / Estimation of Food Additives and Contaminants-
	qualitative and quantitative methods for:
	Water including mineral water.
	Cereals and cereal products
	Pulses and legumes
	Flesh foods
Module 3 (Credit 1.5)	
Learning Outcomes	After learning the module, learners will be able to

	1.Evaluate Product analysis.
	2.Assess purity & quality of food additives & contaminants.
Content Outline	 Milk and milk products Ice creams and sherbets Confectionery Fats and oils including butter, ghee and hydrogenated fat. Fried snacks and high fat foods
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Evaluate Product analysis.
	2.Assess purity & quality of food additives & contaminants.
Content Outline	 Spices and condiments and salt, pickles, sauces and chutneys. Tea and coffee Connect debudgeted, former and bettled for it (constable)
	 Canned, denydrated, frozen and bottled fruit/vegetable products
	• Specific food ingredients such as glycerine, vinegar.
	Fruit juices, concentrates and beverages.
Assignments/Activit	ies towards Comprehensive Continuous Evaluation (CCE)
Survey on prod	ucts available in the market
Application and	classification based on the method of preservation used

Certification course HACCP

2.6 Major (Core)

Course Title	Human Nutrition II (Micronutrients) (Theory)	
Course Credits	4	
Course Outcomes	After going through the course, learners will be able to	
	1. Recognize the physiological and metabolic role of vitamins and minerals in human nutrition.	
	2. Evaluate the pharmacological actions of various vitamins & minerals along with their implications.	
Module 1 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	
	1. Acknowledge the metabolism of fat soluble vitamins	
	Explore the pharmacological & therapeutic role of fat soluble vitamins.	

Content Outline	For each of the vitamins & minerals, the following will be
	discussed:
	Historical background
	Structure and chemistry
	Food sources
	Metabolism (digestion absorption transport storage and
	elimination) Bioavailability and factors affecting
	hioavailability
	Diodvallability.
	Assessment of status
	 Interaction with other nutrients, regulation of gene
	expression (wherever applicable)
	 Pharmacological and therapeutic effects
	 Requirements, methods for estimating requirements and
	recommended daily allowance.
	 Deficiency, overload and toxicity.
	Fat Soluble Vitamins
	Vitamin A and Beta Carotene
	Vitamin D
	Vitamin E
	Vitamin K
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1 Acknowledge the metabolism of water soluble vitamins
	1.Acknowledge the metabolism of water soluble vitamins
	1.Acknowledge the metabolism of water soluble vitamins
	 1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins
	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins.
Content Outline	 1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine
Content Outline	 1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid
Content Outline	 1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂
Content Outline	 1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂ h. Biotin i. Pantothonic acid
Content Outline	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B ₁₂ h. Biotin i. Pantothenic acid
Content Outline Module 3 (Credit 1)	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂ h. Biotin i. Pantothenic acid
Content Outline Module 3 (Credit 1) Learning Outcomes	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂ h. Biotin i. Pantothenic acid After learning the module, learners will be able to
Content Outline Module 3 (Credit 1) Learning Outcomes	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂ h. Biotin i. Pantothenic acid After learning the module, learners will be able to

Content Outline Module 3 (Credit 1) Learning Outcomes	1.Acknowledge the metabolism of water soluble vitamins 2.Explore the pharmacological & therapeutic role of water soluble vitamins. Water Soluble Vitamins a. Ascorbic acid b. Thiamin c. Riboflavin d. Niacin e. Pyridoxine f. Folic acid g. Vitamin B₁₂ h. Biotin i. Pantothenic acid After learning the module, learners will be able to 1.Acknowledge the metabolism of macro-minerals 2.Explore the pharmacological & therapeutic role of macro-minerals.

Content Outline	Macrominerals
	a. Calcium and Phosphorus
	b. Magnesium
	c. Sodium, Potassium, Chloride
Module 4 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Acknowledge the metabolism of micro-minerals
	2.Explore the pharmacological & therapeutic role of micro-
	minerals
Content Outline	Microminerals
	a. Iron
	b. Copper
	c. Manganese
	d. Iodine
	e. Fluoride
	f: Zinc
	g. Selenium
	h. Cobalt
	i. Chromium
	j. Molybdenum

Course Title	Food Packaging- I
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. State functions of packaging.
	2. Describe the various forms of packaging materials commonly used in food industry.
	3. Explain the principles and process involved in packaging.
	4. Interpret packaging standards and legislation in food packaging materials.
	5. Describe some of the recent developments in food packaging materials.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Recognize concept of packaging and different packaging systems.
	2.Discuss the importance and function of food packaging.
Content Outline	 Packaging – Concept of Packaging, Production, Components of packaging. Packaging of foods, requirement, importance, scope, frame work of packaging strategy, environmental considerations Packaging systems, types- flexible and rigid; retail and bulk; levels of packaging, packaging for exports
Module 2 (Credit 1)	

2.7.1 Major (Core)

Learning Outcomes	After learning the module, learners will be able to
	1.Identify types of packaging techniques and their impact on product.
	2. Identify and apply role of packaging in improving shelf life of food.
Content Outline	 Classification of Packages Primary, Secondary and Tertiary Special Box / Carton, Shrink, Aerosol, Vacuum, Boil-in-bag, Tetra pack, Squeeze tubes, Biodegradable, Laminated etc. Significance and functions Construction of Packages, Process Chart Shelf-life testing
	 Different types of packaging materials, their key properties, and applications- Metal cans and aluminium Plastic packaging, different types of polymers used in food packaging and their barrier properties. Types of plastic packaging materials; Glass containers used in food packaging, manufacture of glass and glass containers, closures for glass containers. Paper and paper board packaging, modification of barrier properties and characteristics of paper/boards.
Module 3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	 Elaborate on the different packaging techniques used for various foods.
	2. Elaborate on the aseptic packaging system.
Content Outline	 Packaging of Processed Food Products, dehydrated products, Ready to eat/ cook foods Packaging of Meat, Fish and Poultry Packaging of Fresh Foods Packaging of Dairy Products Packaging of Bakery and Confectionery Packaging of fruit juices Aseptic Packaging – Sterilization of Packaging Materials, Using Aseptic System, process of aseptic packaging
Module 4 (Credit 1)	

Learning Outcomes	After learning the module, learners will be able to
	1.Recognize FSSAI guidelines for packaging and labeling.
	Identify and apply testing techniques and disposal methods for various packaging materials.
Content Outline	 Package testing Testing methods for flexible materials, rigid materials and semi rigid materials Tests for paper, glass containers, metal containers FSSAI Food Packaging and Labelling regulations, guidelines and act Disposal and recycling of packaging waste
Assignments/Activities tov	wards Comprehensive Continuous Evaluation

(CCE):

- Identify various packaging material of the market sample
- Explain role of packaging in increasing shelf life.
- Elaborate different package testing techniques.

Course Title	Waste Management
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Elaborate on the the key concept of waste management
	2. Sensitize about the problem of waste generation and its impact on environment and human health.

2.7.2 Major (Core)

	3. Get knowledge about existing legislation, knowledge, and practices regarding Waste Management in the country.
	4. Build a career in the fields of Environmental Hygiene, Waste Water and Solid Waste Management
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Identify and Elaborate on the types of wastes
	2. Recognize the characterization and utilization of by- products
Content Outline	 Problem of Wastes Types of Solid Waste, Categories of solid waste, Effects of Excess Waste Generation, Waste Characterisation Characterization and utilization of by-products from cereals, pulses, oilseeds, fruits, vegetables, plantation, dairy, eggs, meat, fish and poultry processing industries. Elements of importance in efficient management of wastes from aforesaid food industries. Standards for emission or discharge of environmental pollutants from food processing industries Characterization of food industries effluents, in terms of parameters of importance
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Elaborate on effluent treatment techniques
	2. Identify and discuss parameters of effluent treatment

Content Outline	 Concept of treating food industry effluents: Screening, sedimentation, floatation as per and primary treatments, biological oxidations: objectives, organisms, reactions, oxygen requirements, aeration devices. Effect on characteristic parameters of effluents in treatments using lagoons, trickling filters, activated sludge process, oxidation ditches, rotating biological contracters and their variations and advanced modifications. 	
Learning Outcomes	After learning the module, learners will be able to	
	1. Elaborate on the advanced water treatment system	
	2. Application on the utilization of bio waste	
Content Outline	 Advanced waste water treatment systems: physical, physicochemical and chemical treatments. Coagulation and flocculation, disinfection, handling and disposal of sludge and treated effluents conforming to EPA provisions. Bio filters and Bio clarifiers, Ion exchange treatment of waste water, Drinking-Water treatment, Recovery of useful materials from effluents by different methods. Utilisation of by products 	
Module 4 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	
	1. Elaborate on the waste management system, and its application	
	2. Identify practices followed and success stories in waste management	
Content Outline	1. Approaches to Effluent Waste Management- Basic unit operations in wastewater treatment, Anaerobic digestion of organic residues and wastes, fundamentals and applications of anaerobic digestion for sustainable treatment of	

	 food industry wastewater, Effluent treatment strategies for dairy/ brewery/ winery, Common biological treatment processes and on-site treatment systems. 2. Case studies, commercially viable practices and success stories of value-added products of waste and by-products from processing of different plant and animal food products, Food waste for pulp & paper, flavorings and aromas production
Assignments/Activities to	wards Comprehensive Continuous Evaluation (CCE):

- Explain waste management techniques
- Visit report on effluent treatment plant in food industry
- Elaborate on advanced effluent treatment techniques

Course Title	Sustainability and Environmental, Social Governance
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Elaborate and apply the principles, challenges, and opportunities within the field of sustainability and sustainability infrastructure.
	2. Acquire knowledge about air quality, water management, waste reduction

2.7.3 Major (Core)

	3. Recognize environmental ethics, and green finance.	
	4. Describe how ESG operates as a process for mitigating environmental and social risks in practice.	
	5. Explain the shifting role of investors, in particular institutional investors, with respect to embracing environmental and social issues.	
Module 1 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	
	1. Elaborate on the sustainability and its importance.	
	2. Develop an encompassing understanding of sustainability issues.	
Content Outline	 Introduction to Sustainability General introduction of Sustainability Defining Sustainability and its Dimensions Historical Evolution of Sustainability Sustainable development goals Air Quality and Pollution Control Understanding air pollution sources and effects Air quality monitoring and management Sustainable air quality improvement strategies 	
Module 2 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	
	1. Identify challenges in waste management, recycling and reducing waste.	
	2. Recognize the importance of circular economy.	
Content Outline	 Water Resources Management Principles of Water Management and Conservation Challenges in Water Scarcity and Quality Sustainable Water Management Techniques Waste Management and Circular Economy Solid Waste Generation and Disposal Challenges Strategies for Reducing, Reusing, and Recycling Waste Introduction to Circular Economy and its principles 	
Module 3 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	

	1. Discuss the conflicts which are involved in the sustainability concept on the local, national as well as on the global level.	
	2. Identify different stakeholders in a challenge to sustainability, and analyze the political and economic structures that connect them.	
Content Outline	 Environmental Ethics and Governance Ethical Considerations in Sustainability decision making of Environmental Policies and Regulations Role of Stakeholders in Sustainability Governance Green Finance and Economics Principles of Green Finance and Sustainable Investments Evaluating Environmental and Social Impact in Finance Financing Models for Renewable Energy and Conservation Projects Sustainable Infrastructure Green Building Design and Construction Energy-Efficient Infrastructure Planning Integration of Sustainable Technologies in Infrastructure 	
Module 4 (Credit 1)		
Learning Outcomes	After learning the module, learners will be able to	
	1. Elaborate on the embedment of sustainability issues in environmental, societal, and economic systems, and the relevance of the conditions, interrelations, and dynamics of these systems.	
	2. Use ESG management and investing as climate impact and risk management tools.	
Content Outline	 Biodiversity and Ecosystem Services Importance of Biodiversity and Ecosystem Health Ecosystem Services Valuation and Conservation Restoration Ecology and Biodiversity Enhancement Climate Change and Adaptation Understanding Climate Change Science and Impacts Mitigation and Adaptation Strategies Role of Individuals and Communities in Climate Action 	

Assignments/Activities Evaluation (CCE):

- Ouizzes
- Group Discussions and Debates
- Case Study Analysis
- Research Papers
- Capstone Project Presentation and Report
- Field Visits

2.8 OJT

Course Title	Internship
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	 Acquire professional skills in various departments of food industry /quality testing laboratories.
	 Understand working environment of food industry.
	3. Get Acquitted with the various aspects of entrepreneurship.
	 Understand the scope, functions, and job responsibilities in various department of organization.
Learning Outcomes	After learning the module, learners will be able to
	1. Gain an understanding of workplace dynamics, professional expectations.
	2. Refine and clarify professional and career goals through critical analysis of the internship experience or research project.
Content Outline	 Every candidate shall undergo professional training for 30 days in large scale/ MSME/ food processing units/ Food and water testing laboratory. Internal and External evaluation will be carried out to assess the progress of the work during Internship At the end of the professional training the student must submit a report for which viva will be conducted by an External Examiner.
	 a. Orientation to In plant training b. Documentation c. Project report preparation d. Presentation

End of Semester II
