## SNDT Women's University, Mumbai

# M.Sc. (Food Science & Nutrition)

### 2023

## **Structure for Four Semesters**

### M.Sc. (Food Science and Nutrition)

Semester I						
SN	Courses	Type of Course	Credits	Marks	Int	Ext
114311	Physiological Biochemistry (Th.)	Major (Core)	4	100	50	50
114312	Food Chemistry (Th.)	Major (Core)	4	100	50	50
114313	Human Nutrition I (Macro nutrients & water) (Th.)	Major (Core)	4	100	50	50
114324	Methods of Investigations in Foods & Nutrition (Pr.)	Major (Core)	2	50	50	0
124321 124312	Food Science & Chemistry (Pr.) OR Public Nutrition & Health (Th.)	Major (Elective)	4	100	50	50
134311	Research Methodology (Th.)	Minor Stream (RM)	4	100	50	50
	End of Semester I		22	550	300	250
		Semester I	I			
214311	Food Microbiology I	Major (Core)	4	100	50	50
	(Th. & Pr.)		(2 + 2)			
214312	Human Nutrition II (Micro nutrients) (Th.)	Major (Core)	4	100	50	50
214313	Food Safety & Quality Control (Th. & Pr.)	Major (Core)	4 (1 + 3)	100	50	50
214324	Food Product Development, Modification & Sensory Evaluation (Pr.)	Major (Core)	2	50	0	50

224321	Food Processing & Technology (Pr.) OR	Major (Elective)	4	100	50	50
224312	Food Quality Standards & Regulations (Th.) OR					
224313	Functional Foods, Biodynamic Principles, Nutraceuticals OR					
224314	Food Entrepreneurship					
244341	Internship *	TLO	4	100	50	50
Exit with PG Diploma in Food Science Nutrition (FSN)		22	550	250	300	

(\* Internship at Research & Development Laboratory/Food Analysis Laboratory/ Nutrition Research)

### SECOND YEAR

# M.Sc. (Food Science & Nutrition)

	Semester III					
Code	Courses	Type of Course	Credit s	Marks	Int	Ext
314311	Statistical Application in Research	Major (Core)	4	100	50	50
314312	Maternal & Child Nutrition (Th.)	Major (Core)	4	100	50	50
314313	Food Microbiology II (Th. & Pr.)	Major (Core)	4 (2 +2)	100	50	50
314324	Assessment of Nutritional Status (Pr.)	Major (Core)	2	50	0	50
324321 324312	Food Product Development (Pr.) OR Genetics OR Research from Molecular	Major (Elective)	4	100	50	50
324313	Level to Human OR Recent Methods in Food Processing,					
324314	Preservation and Packaging OR Understanding Metabolic					
324315	324315 and Cardiovascular Health OR					
324316	Microbiology and Safety					
354331	Research Project	RP	4	100	50	50
	End of Semester III		22	550	250	300
	Sem	nester IV				
414311	Nutrigenetics & Nutrigenomics (Th.)	Major (Core)	4	100	50	50
414312	4312 Nutrition Human Microbiome & Health (Th.)		4	100	50	50
414323	Nutrition in Society (Pr.)		4	100	50	50
424311	Environment Sustainability,	Major (Elective)	4	100	50	50
424312	Health OR Integrated Lifestyle					
424313	Health Management OR Integrated Diet and					

424314	Musculoskeletal Health OR					
	Food Product Development for					
424315	Special population OR Indian					
121316	Knowledge Systems in Diet,					
727510	Food & Health OR Nutritional					
424317	Epidemiology					
454331	Dissertation	RP	6	150	100	50
End of S		22	550	300	250	

## Course Syllabus

#### Semester III

### 3.1 Major (Core)

Course Title	Statistical Application in Research
Subject Code	314411
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Identify parametric and non-parametric tests
	2. Apply statistical tests for data analysis for both large and small samples
	3. Interpret the results of statistical analysis of data
	4. Summarize data and present it using tables and graphs
Module 1 (Credit 1) -	$\cdot$ Basics of statistics, data management, and statistical tests.
Learning Outcomes	After learning the module, learners will be able to
	1. Analyse parametric and non-parametric test
	2. Apply the statistical programs for data management
Content Outline	Introduction to Statistics
	Definition, conceptual understanding of statistical measures, popular concepts and misuse of statistics
	Normal Distribution and its Properties
	a. Normal distribution b. Binomial distribution c. Probability, use of normal probability tables, area under normal distribution curve d. Parametric and non-parametric tests
	Data Management Planning for data analysis – coding of responses, preparation of code book Coding of data Use of statistical programs - MS Excel - SPSS
Module 2(Credit 1) -	Understanding and applying data analysis methods.
Learning Outcomes	After learning the module, learners will be able to

	1. Describe quantitative analysis, descriptive & inferential
	statistics.
	2. Apply large and small sample tests and interpret the results.
Content Outline	Data Analysis
Module 3(Credit 1) -	<ul> <li>a. Quantitative analysis, descriptive statistics, inferential statistics: Uses and limitations, Summation sign and its properties</li> <li>b. Proportions, percentages, ratios</li> <li>c. Measures of central tendency-mean, median, mode-arithmetic mean and its uses, mid – range, geometric mean, weighted mean</li> <li>d. Measures of dispersion /variability- range, variance, standard deviation, standard error, coefficient of variation, Kurtosis, skewness Grouped data-frequency distribution, histogram, frequency polygons, percentiles, quartiles, tertiles, ogive</li> <li>e. Large and Small Sample tests and interpretation <ul> <li>. Z-test for single proportions and difference between proportions</li> <li>. Large sample test for single mean and difference between means</li> <li>. Small sample tests- `t'-test, paired 't'-test, `F' Test</li> </ul> </li> </ul>
Learning Outcomes	After learning the module, learners will be able to
	1. Interpret chi square test, correlation & regression
	2. Distinguish between experiment designs
Content Outline	Chi square test and its interpretation
	b. Independence of Attributes
	Correlation and Regression and its interpretation
	a. Basic concepts b Linear regression and correlation coefficient Regression and prediction
	c. Rank correlation, Product-moment method
	Analysis of Variance and its interpretation a. One-factor analysis of variance b. Two-factor analysis of variance
	Design of Experiments
	b. Randomized block design
	c. Latin square design d. Factorial design
Module 4(Credit 1)-	Presenting data and creating research proposals
Learning Outcomes	After learning the module, learners will be able to

	1. Discuss the presentation of Data
	2. Prepare research proposal
Content Outline	Presentation of Data
	<ul> <li>a. Tabulation and Organization of data- frequency distributions, cumulative frequency distribution, contingency tables</li> <li>b. Graphical presentation of data- histogram, frequency polygon, ogive, stem and leaf plot, box and whiskers plot, Graphs for nominal and ordinal data- pie diagram, bar graphs of different types, graphs for relation between two variables, line diagram. Use of illustrations</li> <li>Cautions in visual display of data</li> </ul>
	The Research Report Basic components of a research report- prefatory material, introduction and Review of Related Literature, Methodology, Results, Discussion, Conclusion, Summary, Abstract, Bibliography and Appendices Students to design a research study on a topic- - specify type of research - sample selection - protocol/operationalization - tools - tests for statistical analysis
	Preparation of a Research Proposal

- Assignment on a standard normal curve
- Assignment on calculation of descriptive statistics
- Assignment to test the hypothesis
- Assignment on sample size calculation

- Banerje, B. (2018): Mahajan's Methods in Biostatistics for Medical Students and Research Workers, 9th edition, Jaypee Brothers
- Chowdhary, N. and Hussain, S. (2021): Handbook of Research and Publication Ethics, 1st edition, Bharti Publications
- Jain, R.K. (2021): Research Methodology: Methods & Techniques, 5th edition, Vayu Education of India VEI Publishers
- Kothari, C.R. and Gang, G. (2019): Research Methodology: Methods & Techniques, 4th edition, New Age International Publishers
- Nelson, M. (2020): Statistics in Nutrition & Dietetics, 1st edition, Wiley-Blackwell
- Ramalingam, A.T. and Kumar, SN. (2018): Essentials of Research Methodology, 1st edition, Jaypee Brothers

## 3.2 Major (Core)

Course Title	Maternal & Child Nutrition
Subject Code	314312
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
course outcomes	After going through the course, learners will be able to
	1. Discuss the physiological changes in pregnancy and lactation
	2. Describe the growth and developmental changes from conception till adolescence.
	3. Identify the inter-relationship between nutrition and growth and development during life cycle
	4. Apply their knowledge in community and public nutrition/health programmes
Module 1(Credit 1) -	Nutrition and pregnancy care.
Learning Outcomes	After learning the module, learners will be able to
	1 Determine the physiological changes during pregnancy and
	discuss the stages of embryonic development
	2. Discuss the putritional requirements during program
	2. Discuss the nutritional requirements during pregnancy
	3. Determine the various complications that occur during
	pregnancy and their management
Content Outline	Changing concepts and controversies in Maternal and Child Nutrition
	<b>Importance of Maternal Nutrition during Pregnancy:</b> Unit 1. Importance of nutrition prior to and during pregnancy
	Unit 2. Pre-requisites for successful outcome. Effect of undernutrition on mother-child dyad including pregnancy outcome and Maternal and Child Health – Short term and long term
	Unit 3. Physiology and endocrinology of pregnancy and embryonic and fetal growth and development
	Unit 4. Nutritional requirements during pregnancy
	Unit 5. Adolescent Pregnancy
	Unit 6. Pregnancy and AIDS, Pregnancy and TB
	Unit 7. Intra-uterine growth retardation critical windows of development and programming concepts

	Unit 8. Complications of pregnancy and management and importance of antenatal care
	Unit 9. Congenital malformations, fetal alcohol syndrome and gestational diabetes mellitus
Module 2(Credit 1) -	Breastfeeding and infant nutrition
Learning Outcomes	After learning the module, learners will be able to
	1. Describe the physiology and endocrinology of lactation
	2. Discuss the nutritional composition of breastmilk
	3. Describe key nutritional strategies for infant feeding and importance of exclusive breastfeeding
	4. Identify problems faced by lactating mothers and their management
Content Outline	Lactation and Infant feeding Unit 1. Development of mammary tissue and role of hormones
	Unit 2. Physiology and endocrinology of lactation – Synthesis of milk components, let down reflex, role of hormones, lactational amenorrhea, effect of breast feeding on maternal health
	Unit 3. Human milk composition and factors affecting breastfeeding and fertility, maternal nutritional status and milk composition
	Unit 4. Management of lactation – Prenatal breastfeeding skills Education. Rooming in, problems – sore ripples, engorged breast, inverted nipples
	Unit 5. Exclusive breastfeeding Baby friendly Hospitals Initiative
	Unit 6. Breast feeding in the age of AIDS
	Feeding of infants and children and dietary management, key issues in infant Feeding
Module 3(Credit 1) -	Child growth and preterm infant care
Learning Outcomes	After learning the module, learners will be able to
	1. Discuss nutritional management strategies adopted for preterm and LBW infants
	2. Describe the growth and development patterns in various stages of childhood
	3. Apply the knowledge of using growth charts into practise by conducting growth monitoring of infants, children and adolescents

Content Outline	Infant physiology and the preterm and LBW infants: Implications for feeding and management
	Growth and development during infancy, childhood and adolescence
	a.Normal pattern of growth and development
	c. Growth monitoring and promotion, growth faltering, Failure to thrive
Module 4(Credit 1) -	Malnutrition and health programs
Learning Outcomes	After learning the module, learners will be able to
	1. Determine the intergenerational impact of maternal and child malnutrition
	2. Discuss public health policies and programmes in realm of maternal and child care in India
Content Outline	Malnutrition in mothers and children: etiology and management (in brief)
	Consequences of malnutrition on physical development, mental development, cognitive development. Effect of deficiencies of specific nutrients
	Current Nutrition and Health Status of Women and Children in India.
	Policies and programmes for promoting maternal and child nutrition & health. International, national and state level
	Concept of small family, methods of family planning, merits and demerits.

- Assignment on clinical assessment of malnutrition amongst children.
- Case study of low-birth-weight babies.
- Nutritional assessment of mothers.
- Workshop on SAM and MAM children.
- Visit to ICDS Centres.

- ACC/SCN Reports

## 3.3 Major (Core)

Course Title	Food Microbiology II
Subject Code	314313
Course Credits	4 (2 Th+2 Pr)
Course Outcomes	After going through the course, learners will be able to
	1. Discuss the hazards of food- borne disorders and identify the recent procedures adopted in various food operations to prevent them
	2. Conduct bacteriological examination of food samples
	3. Apply the concepts of food safety and microbiological testing into practice
Theory - Module 1(C	redit 1) - Food-borne diseases and harmful microbes.
Learning Outcomes	After learning the module, learners will be able to
	1. Describe the common pathogens implicated in food-borne disorders
	2. Discuss the risk factors and impact of food-borne disorders
Content Outline	Food borne infections and diseases:
	Significance to public health
	Food hazards and risk factors
	Bacterial, and viral food-borne disorders, Food-borne important animal parasites, Mycotoxins.
	Bacillus, Campylobacter, Brucella, Staphylococcus, Clostridium, E.coli, Aeromonas, Vibrio cholerae, Listeria, Mycobacterium,Salmonella, Shigella
Module 2(Credit 1) -	Food safety rules and HACCP
Learning Outcomes	After learning the module, learners will be able to
	<ol> <li>Determine the legal rules and regulations concerning food safety</li> </ol>
	2. Apply the principles of HACCP in conducting food safety analysis

Content outlineQuarty content of Quarty resonanceLegislation for food safety – national and international Criteria, sampling schemes, records, risk analysis QC- microbial source, code Indicators of food safety and quality: Microbiological criteria of foods and their significance The HACCP system and food safety used in controlling microbiological hazardsPractical - Module 1(Credit 1) - Testing food for bacteriaLearning OutcomesAfter learning the module, learners will be able to 1. Conduct tests for identification of bacterial contamination of food samplesContent OutlineVarious biochemical tests used in identification of commonly found bacteria in foods:IMVIC urease, H2S, Catalase, coagulase, gelatin andfermentation (Acid/gas) Demonstration of microorganisms or their products. HACCPModule 2 (Credit 1) - Visiting food labs and projectsLearning OutcomesAfter learning the module, learners will be able to - 1. Summarize latest techniques in food microbiologyVisits (at least two) to food processing unit or any other organizationdealing with advanced methods in food microbiology	Content Outline	Quality Control/Quality Assurance
Legislation for food safety – national and international Criteria, sampling schemes, records, risk analysis QC- microbial source, code Indicators of food safety and quality: Microbiological criteria of foods and their significance The HACCP system and food safety used in controlling microbiological hazardsPractical - Module 1(Credit 1) - Testing food for bacteriaLearning OutcomesAfter learning the module, learners will be able to 1. Conduct tests for identification of bacterial contamination of food samplesContent OutlineVarious biochemical tests used in identification of commonly found bacteria in foods: IMVIC urease, H2S, Catalase, coagulase, gelatin andfermentation (Acid/gas) Demonstration of available rapid methods and diagnostic kits used In identification of microorganisms or their products. HACCPModule 2 (Credit 1) - Visiting food labs and projectsAfter learning the module, learners will be able to - 1. Summarize latest techniques in food microbiologyContent OutlineVisits (at least two) to food processing unit or any other organizationdealing with advanced methods in food microbiology		Quality control/ Quality Assurance
Criteria, sampling schemes, records, risk analysis QC- microbial source, code Indicators of food safety and quality: Microbiological criteria of foods and their significance The HACCP system and food safety used in controlling microbiological hazardsPractical - Module 1(Credit 1) - Testing food for bacteriaLearning OutcomesAfter learning the module, learners will be able to 1. Conduct tests for identification of bacterial contamination of food samplesContent OutlineVarious biochemical tests used in identification of commonly found bacteria in foods: IMVIC urease, H2S, Catalase, coagulase, gelatin andfermentation (Acid/gas) Demonstration of available rapid methods and diagnostic kits used In identification of microorganisms or their products. ## 3.4. Major (Core)

Course Title	Assessment of Nutritional Status
Subject Code	314324
Course Credits	2
Course Outcomes	After going through the course, learners will be able to
	1. Analyze and various methods for assessment of nutritional status, body composition analysis.
	2. Carry out and interpret the assessment of dietary/nutrient intakes
	3. Conduct assessment of physical activity and energy expenditure
Practical - Module 1	(Credit 1) - Body Composition & Anthropometry
Learning Outcomes	After learning the module, learners will be able to
	1. Evaluate the different body composition analysis techniques for nutritional assessment
	2. Apply the correct methods for anthropometric measurements
Content Outline	Assessment of Nutritional Status
	a) Reliability
	b) Validity
	c) Accuracy
	d) Precision
	Measurement of weight and height
	a) Assessment of nutritional status for adults, young and older children
	b) Calculation of BMI
	c)Interpretation Use of WHO reference standards Wasting, stunting, underweight, severe and moderate malnutrition
	d) Calculation of z-scores and use of software
	Circumference Measurements – chest, head, mid arm. Waist, hip and ratios wherever applicable to children and adults
	Body Composition

	a) Use of skinfold
	b) Bioelectric impedance
	c) Dual X-ray Absorptiometry (DEXA)
	d) Calculation of body fat
	WHO Software for Z Scores, IAP Growth charts.
Module 2(Credit 1) -	Dietary Intake & Energy Expenditure
Learning Outcomes	After learning the module, learners will be able to
	<ol> <li>Determine the legal rules and regulations concerning food safety</li> </ol>
	2. Apply the principles of HACCP in conducting food safety analysis
Content Outline	Dietary intake assessment
	a) Food frequency questionnaire
	b) A 24-hour diet recall and record - Weighment method
	b) A 24-hour diet recall and record - Weighment method Assessment of energy expenditure
	<ul> <li>b) A 24-hour diet recall and record - Weighment method</li> <li>Assessment of energy expenditure</li> <li>a) Indirect calorimetry - use of ergometer, treadmill, heart rate monitoring</li> </ul>
	<ul> <li>b) A 24-hour diet recall and record - Weighment method</li> <li>Assessment of energy expenditure</li> <li>a) Indirect calorimetry - use of ergometer, treadmill, heart rate monitoring</li> <li>b) Recording physical activities</li> </ul>
	<ul> <li>b) A 24-hour diet recall and record - Weighment method</li> <li>Assessment of energy expenditure <ul> <li>a) Indirect calorimetry - use of ergometer, treadmill, heart rate monitoring</li> <li>b) Recording physical activities</li> <li>c) Factorial estimation of energy expenditure: MET, PAL Study of food labels- calculation of DV</li> </ul> </li> </ul>
	<ul> <li>b) A 24-hour diet recall and record - Weighment method</li> <li>Assessment of energy expenditure <ul> <li>a) Indirect calorimetry - use of ergometer, treadmill, heart rate monitoring</li> <li>b) Recording physical activities</li> <li>c) Factorial estimation of energy expenditure: MET, PAL Study of food labels- calculation of DV</li> <li>d) Study of food labels- calculation of DV</li> </ul> </li> </ul>

- Executing WHO Software for Z Scores.
- Plotting IAP Growth charts.

## 3.5 Major (Elective)

Course Title	Food Product Development (Practical)
Subject Code	324321
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Apply various aspects of food product development including Food Science and Technology, Marketing and Consumer research, finance and communication
	2. Develop products which meet consumer needs, and are nutritionally and commercially viable
	3. Acquire skills in the various aspects including shelf life assessment, testing of quality parametersand acceptability, packaging and labelling of a product
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Prepare food product and conduct its nutritional evaluation
Content Outline	Nutritional evaluation (estimation of relevant parameters)
	Packaging and Labelling of the product - Packaging design, graphics and labeling
Module 2(Credit 2)	
Learning Outcomes	After learning the module, learners will be able to
	1. Undertake bulk preparation of the proposed food product and conduct its shelf-life testing
Content Outline	Bulk preparation of product
	<b>Shelf-life testing of the product</b> (testing for appropriate quality parameters- chemical, microbiological and nutrient content, acceptability studies)
Module 3(Credit 1)	Product integrity and conformance to standard
Learning Outcomes	After learning the module, learners will be able to
	1. Undertake costing, marketing, advertising and sales of the developed product

Content Outline	Costing the product and determining the sales price Advertising and test marketing the product
Learning Outcomes	<ul><li>After learning the module, learners will be able to,</li><li>1. Compile and present findings of the food product development process.</li></ul>
Content Outline	<ul> <li>Structure of the research report, including methodology, results, and conclusions.</li> <li>Guidelines for effective presentation and communication of findings, including visual aids.</li> </ul>

- Market survey of recent/ innovative food products.
- Assignment on packaging material.
- Test marketing, costing and sensory evaluation.
- Development of food product and quantity food production.

### Journals:

- Critical Reviews in Food Science and Nutrition
- Food Technology
- International Journal of Food Science and Technology
- Journal of Food Technology
- Trends in Food Science and Technology

## 3.6 Research Project

Course Title	Research Project
Subject Code	354331
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Experience the research process and prior to undertaking primary research plan and examine existing literature.
	<ol> <li>Undertake the process of reviewing existing literature, form hypothesis, and define plans for gathering data and analysing data for their research problem.</li> </ol>
	<ol> <li>Recognise process of knowledge production in their subject discipline.</li> </ol>
Module 1(Credit 1) -	Problem Formulation
Learning Outcomes	After learning the module, learners will be able to
	1. Recognize and undertake research problem.
Content Outline	Formulation of problem
Module 2(Credit 2) -	Literature Review
Learning Outcomes	After learning the module, learners will be able to
	1. Review the existing literature
Content Outline	Review of Literature
Module 3(Credit 1) -	Research Proposal Design
Learning Outcomes	After learning the module, learners will be able to
	1. Apply critical thinking to the problem selected for research
Content Outline	Designing Research proposal
Module 4 (Credit 1)	- Data Collection Planning
Learning Outcomes	After learning the module, learners will be able to
	1. Able to design the research work and plan the execution.
Content Outline	Planning tools & techniques for data collection

- Designing a research proposal.
- Presenting review of literature.
  Constructing tools and techniques for data collection.

### Semester IV

### Syllabus Contents

## 4.1 Major (Core)

Course Title	Nutrigenetics And Nutrigenomics
Subject Code	414311
Course Credite	
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Apply Nutrigenetics through the course of life.
	2. Correlate the relationship between genetics of obesity and
	3 Counsel patients based on the principles of putrigenomics
Module 1 (Credit 1)	- Human Genetics Basics
Learning Outcomes	After learning the module, learners will be able to
_	1. Describe the basics of genetics and the normal physiology of
	DNA
	2. Identify diseases with genetic inheritance patterns
Content Outline	Introduction to Human Genetics
	Definition of gene, genome, DNA, allele, chromosome.     Mitosis and Meiosis
	<ul> <li>Mendelian Principles- Chromosome Theory of Heredity</li> </ul>
	(Sutton-Boveri), Inheritance patterns, the phenomenon of
	Dominance, Recessive, and Codominance.
	<ul> <li>Inheritance patterns in Humans (Sex-linked, Autosomal, Mitochondrial, Unifactorial, Multi, factorial)</li> </ul>
	<ul> <li>Molecular effects of genetic variation - polymorphism.</li> </ul>
	genetic linkage- linkage disequilibrium, haplotype, copy
	number variants, and mutations. Hardy-Weinberg
	equilibrium. Gene nomenclature
Module 2 (Credit 1)	- Nutrigenetics & Nutrigenomics Overview
Learning Outcomes	After learning the module, learners will be able to
	2. Evaluate the relationship between putrition environment and
	3 Recognise interactions of epigenetic changes and nutrient
	components.
Content Outline	Introduction to Nutrigenetic and Nutrigenomics
	Interduction to Enigonamics Molecular machanisms of
	<ul> <li>Introduction to Epigenomics, Molecular mechanisms of Epigenomics Epigenomics and Nutrition (Molecular bases of</li> </ul>
	gene-gene and gen-environment interaction), Epigenomics
	and disease,
	What is Nutrigenetics and Nutrigenomics? How are they
	different from each other? Nutrigenomic interactions [direct
	<ul> <li>History of Nutrigenetics- Phenylketonuria MTHER genes</li> </ul>
	Where Nutrigenetics differences comes from- Nutritional
	Relativism, Nutrigenetics and the early life origins of health
Madula 2 (Credit 1)	and diseases.
module 3 (Credit 1)	- Genetics of Metadolic Health

Learning Outcomes	After learning the module, learners will be able to
	1. Examine relationship of genetics of obesity and metabolic
	health.
	2. Recognise the influence of genes on response to dietary
	interventions.
Content Outline	Nutrigenetics and Nutrigenomics of Metabolic Health
	Brief Overview of lipid metabolism
	Genetic disorders of lipid metabolism
	• SNPs associated with Lipid profile – ABCG8, CELSR, LDLR,
	ADCAI, CEIP, APOAI, APOAS, GCKR gene.
	• Genomics of earing behaviour and appende regulation (TPA, serotonin)
	Genetics of body composition; from obesity to extreme
	leanness, Genetic implication of energy homeostasis,
	Genetic variation with influence on the individualized
	response to weight loss diet: FTO Gene as evident, Genetics
	variation with influence on the individualized body fat
	percentage: ADRB3, BDNF, FTO, MC4R, SH1B2, TMEM18.
	<ul> <li>Nutrient-gene interaction studies, lifestyle intervention atudies</li> </ul>
Module 4 (Credit 1)	
Loorning Outcomos	After learning the module, learners will be able to
Learning Outcomes	After rearring the module, rearrers will be able to
	1. Gain skins in undertaking health history using varied tools.
	2. Recognise role of counselling and coaching in nutrigenetic
	counselling.
Content Outline	Effective Health Coaching and Nutrigenetic Counselling
	• Conducting health history questionnaires, health goals,
	identifying physiological parameters that are essential for
	the ideal diet planning
	Purpose of Effective Counselling, explain Nutrigenetic
	recommendations and diet plan, Planning the grocery list.

- 1. Review current ICMR/NIN guidelines for diet in adults
- 2.Report on factors affecting genetic changes and epigenetics
- 3. Formation of a health assessment questionnaire focusing on nutrigenetics.
- 4.Role play of effective nutrigenetic counselling

## 4.2 Major (Core)

Course Title	Nutrition Human Microbiome & Health
Subject Code	414212
Subject code	414312
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1.Illustrate the role of microbiota across the lifespan
Madula 1 (Cradit 1)	2.Explain the application of microbiome in nutritional interventions
Module 1(Credit 1) -	Importance of the Microbiome
Learning Outcomes	After learning the module, learners will be able to
	1. Explain the importance of microbiome in health
Contant Autling	2. Discuss the development of microbiota in the body
Content Outline	Various microbes in human hody
	<ul> <li>Importance of microbiome in human health</li> </ul>
	<ul> <li>Microbiota development in all organ systems (microbiota in</li> </ul>
	different niches like respiratory tract, gut microbiota,
	vaginal and reproductive tract etc.)
	Life changing events and personal microbiota development.
Module 2 (Credit 1)	• Microbiome Across the Lifespan
Learning Outcomes	After learning the module, learners will be able to
	1. Explain the mechanism of microbiome in immunity
	2. Describe the role of microbiome in longevity and ageing
Content Outline	Human Microbiome Across the Lifespan
	<ul> <li>Microbiota development in all epochs or life</li> <li>Dolo of microbiota in aging including healthy aging and rolo</li> </ul>
	<ul> <li>Role of finitrobiola in aging including fielditry aging and role in longevity and ageing related diseases</li> </ul>
	<ul> <li>Role of microbiota in infancy and childhood immunity</li> </ul>
Module 3(Credit 1) -	Microbial Therapies in Disease
Learning Outcomes	After learning the module, learners will be able to
<b>J</b>	1. Elucidate microbial therapies in gastrointestinal diseases
Content Outline	Microbiota In Diet And Disease
	Obesity
	Malabsorption syndrome
	• SIBO
	• GI Surgery
	Microbial therapies and diagnostics and personalized
Module 4 (Credit 1)	- Microbiome in Pharmacology and Nutrition
Learning Outcomes	After learning the module, learners will be able to
	1. Explain the application of healthy microbiome in
	pharmacology and nutritional therapy
Content Outline	Applicability And Societal Impact
	Role and applicability of microbiome in pharmacv and
	medical therapy

<ul> <li>Approaches to study the Microbiome in healthy and</li> </ul>
diseased states using data sets like metagenome
transcriptome genome and other omics approaches.

- 1. Enlist the significant microbes in heath and disease
- 2. Conduct a market survey of nutraceuticals containing microbes
- 3.Design audio visual aids to illustrate microbiome development.

## 4.3 Major (Core)

Course Title	Nutrition In Society (Pr.)
Subject Code	414323
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Familiarize with the problems related to food and nutrition
	security among various communities / socio-economic groups /
	rural, tribal, urban slums.
	2. Enable to assess nutritional status of individuals/group.
	3. Enable to plan, implement, monitor and evaluate intervention
	programmes
	4. Familiarize with the various strategies / approaches used to
	combat malnutrition.
Module 1(Credit 1) -	Food and Nutrition Security in India
Learning Outcomes	After learning the module, learners will be able to
	1.Illustrate the impact of food and nutrition security in India
Content Outline	Food and nutrition security of different segments of the society vis-
	à-vis food production and consumption patterns in different states
	of India
	Enidomiologic and cocio, domographic indicators – current cituation
Module 2 (Credit 1)	- Strategies to Combat Malnutrition
Learning Outcomes	After learning the module learners will be able to
Leanning Outcomes	1 Discuss the strategies of supplementation in vulnerable
	nonulation for malnutrition
	2 Elucidate the economics for such strategies
Contont Outling	2. Elucidate the economics for such strategies
Content Outline	strategies and approaches to compatimal main trition – short term and long term
	For each unit field visits should be undertaken by students. Case
	studies are to be done and report prepared
	a. Food supplementation
	b. Nutrient supplementation
	c. Fortification and enrichment
	a. Food-based approaches, dietary diversification, IEC
	Cost Analysis: Cost benefits, cost effectiveness and cost efficiency
Module 3 (Credit 1)	<ul> <li>Product Development for Vulnerable Groups</li> </ul>
Learning Outcomes	After learning the module learners will be able to
	1 Develop food products for vulnerable groups and specific target
	nonulation
Content Outline	Development and preparation of food supplements for various
	target groups and programmes e.g. pre-schoolers.
	pregnant/lactating women, mid-day meal programme, emergency
	situations, Nutritional rehabilitation centres.
Module 4 (Credit 1)	- Evaluating Nutrition Policies and Programs
Learning Outcomes	After learning the module, learners will be able to
	1. Identify the strengths and weakness of national and state
	policies and programmes for nutrition intervention
Content Outline	Appraisal of existing programmes: Planning and
	implementation of an intervention programme

1. Situation analysis and needs identification
2. Intervention planning and intervention
3. Plan for monitoring and evaluation

- 1. Visit to an NGO
- 2. Recipe development and demonstration for nutrition awareness through interactive aids targeting people of different age groups

## 4.4.1 Major (Elective)

Course Title	Nutritional Epidemiology
Subject Code	424317
Course Credits	4
Course Outcomes	After going through the course, learners will be able to
	1. Examine epidemiologic methodology in relation to nutritional
	measures
	2. Conduct nutritional epidemiologic research
	3. Identify and interpret scientific literature about the relationship
	between nutrition and disease
Module 1 (Credit 1)	- Principles of Epidemiological Study Design
Learning Outcomes	After learning the module, learners will be able to
	1. Describe the principles of epidemiological study design
Content Outline	Introduction to Epidemiology
	<ul> <li>Definition, nutritional epidemiology, history</li> </ul>
	Purpose of undertaking nutritional epidemiological studies
	Components – reveis or data outputs     The opidemiology triad
	<ul> <li>Methodological considerations in study designs in putritional</li> </ul>
	enidemiology
	<ul> <li>Life-span developmental approach in nutritional</li> </ul>
	epidemiology
Module 2 (Credit 1)	- Dietary Assessment Methods
Learning Outcomes	After learning the module, learners will be able to
_	1. Describe the range of dietary assessment methods and discuss
	their application
	2. Discuss the strengths and limitations of nutritional
	epidemiological methods
Content Outline	Types of nutritional epidemiological studies
	KAP survey
	Consumer survey
	Incidence reports
	Prevalence studies
	RCTs
	Nutrition Database
	Methods of dietary assessments – key features, strengths,
	• 24-110ur recall
	<ul> <li>Food Frequency Questionnaires</li> </ul>
	Weighment Method
Module 3 (Credit 1)	- Interpreting Nutrition and Disease Associations
Learning Outcomes	After learning the module, learners will be able to
_	1.Interpret nutritional epidemiological research
	2.Describe the associations between diet and disease
Content Outline	Linking exposures and outcomes - Evaluation of
	diet/disease relationships
	<ul> <li>association and causation,</li> </ul>
	• role of chance, errors, bias, and confounding variables.

	<ul> <li>adjustment for total energy, selection of co-founders,</li> </ul>			
	continuous versus categorical analyses			
	Interpretation of nutritional epidemiological findings			
	<ul> <li>correlations, linear and logistic regressions, factor analyses,</li> </ul>			
	analysis of variance			
	<ul> <li>Issues in analysis and presentation of dietary data and</li> </ul>			
	biostatistics			
	<ul> <li>A single dietary factor and whole diet approaches in epidemiological analysis</li> </ul>			
Module 4 (Credit 1) - Applications of Nutritional Epidemiology				
Learning Outcomes	After learning the module, learners will be able to			
	1. Provide examples of food policy in practice in vulnerable			
	population groups			
	2.Describe the socio-ecological influences on food choice			
Content Outline	Applications of nutritional epidemiology			
	<ul> <li>Policy making in healthy and vulnerable populations</li> </ul>			
	Food product development			
	Clinical recommendations			
	<ul> <li>Food economics and social impact of food choices, etc.</li> </ul>			
	Recent advances in technological methods of nutritional			
	epidemiology – AI, digital dietary assessment, etc.			
	Key study designs and ethical considerations in NE			

- 1. Design and conduct an end-in-sight KAP survey in a small group
- 2. Design a dietary assessment tool that can be used with modern technologies like AI and video conferencing

### 4.4.2 Major (Elective)

Course Title Subject Code	Food Product Development for Special Population 424314			
Course Credits	4			
Course Outcomes	After going through the course, learners will be able to -			
	<ol> <li>Apply various aspects of food science for dietary management and product development.</li> </ol>			
	2. Develop products which meet nutritional needs of consumers.			
	<ol><li>Explore theoretical concepts and apply during product development/ modification.</li></ol>			
	<ol> <li>Use different sensory methods to evaluate a variety of developed foods.</li> </ol>			
Module 1 (Credit 1)	- Enhancing Food Attributes			
Learning Outcomes	After learning the module, learners will be able to -			
	1. Plan specific ingredients to enhance the appearance, texture, and taste of any particular food.			
Content Outline	<ul> <li>Use of different food ingredients for development of health foods – artificial sweeteners, modified starches, fat replacers, increasing fiber content, functional ingredients, low sodium food adjuncts, protein concentrates, whey</li> </ul>			
Module 2 (Credit 1)	- Nutritional Needs in Extreme Conditions			
Learning Outcomes	After learning the module, learners will be able to -			
	<ol> <li>Evaluate nutritional needs based on specific conditions and develop wholesome, nutrient-dense foods.</li> </ol>			
Content Outline	<ul> <li>Developing foods for people under specified conditions: High altitude, Extreme temperatures (high and low), Under water (Scuba divers), Space foods (Astronauts).</li> </ul>			
Module 3 (Credit 1)	- Food Development for Crisis Situations			
Learning Outcomes	After learning the module, learners will be able to -			
	1. Develop wholesome and nutrient dense foods based on foods			
	available to meet the nutrient requirements			
Content Outline	Developing foods for people under certain unforeseen     situations and natural calamities: War situation (Army			
	Navy, Air Force), Political unrest, Drought, Famine, Floods,			
	Earthquakes			
Module 4 (Credit 1)	- Alternatives for Allergies and Intolerances			
Learning Outcomes	After learning the module, learners will be able to -			
	<ol> <li>Develop food alternatives for people with allergies and intolerance</li> </ol>			
Content Outline	Foods for people with allergies and intolerances: Lactose			
	free, gluten free			
	<ul> <li>vegan foods, mock meats</li> </ul>			

### Assignments/Activities towards Comprehensive Continuous Evaluation (CCE):

1.Develop innovative recipes using artificial sweetener & fat replacer

2.Develop product for any specific condition (High Altitude, extreme temperatures, space food, etc.

3.Plan a food care kit for any unforeseen situations.

### 4.5 Research Project

454331	Dissertation			
Sr. No.	Modules and Outcomes	Course Contents	Cr	
Course	At the end of this course Learn	ers will be able to –		
outcomes.	- Demonstrate mastery of parametric and non-parametric statistical tests through application in data analysis			
	- Evaluate and critique qu	uantitative analysis methods,		
	demonstrating proficien	cy in interpreting large and small		
	sample tests for inferen	tial statistics.		
	- Synthesize advanced st	atistical techniques such as chi-square		
	and draw meaningful conclusions			
	- Construct an argument based on their prior research proposal,			
	integrating data analy	sis and presentation techniques and		
Fallensing Cha	drawing summary and d	conclusion with clarity and precision.		
ronowing Ste	eps to be completed during th			
	Data collection / finalizatio	n/ analysis		
	Gather and finalize any     discortation	remaining data required for the		
	<ul> <li>Ensure all data is comp</li> </ul>	lete validated and ready for analysis		
	Conduct final data analy	ysis using appropriate statistical		
	methods.			
	<ul> <li>Validate findings and en</li> </ul>	sure they align with research objectives		
	Finalization of chapters of T	ntroduction & Methodology		
	Review and finalize the	introduction chapter, providing a clear		
	rationale and backgrour	nd for the study.		
	Refine the methodology	chapter, detailing the research design,		
	sampling methods, and	data collection procedures.		
	Elisure all methodologic     align with the research	auestions		
	<ul> <li>Incorporate any feedbac</li> </ul>	ck or suggestions to enhance the clarity		
	and coherence of these	chapters.		
	Finalization of Results and Discussion			
	Analyse and interpret the analysis	ne final results obtained from the data		
	<ul> <li>Present findings in a clear</li> </ul>	ar and structured manner. using tables.		
	graphs, and figures as i	needed.		
	Discuss the implications	s of the results in relation to the		
	research questions and	existing literature.		
	Address any unexpected     nossible explanations	a findings or limitations and provide		
	Finalization of Summary and	d Conclusion		
	Summarize the key find	ings of the dissertation in the summary		
	chapter.			
	Discuss the significance     to the field of study	e of the findings and their contributions		
	<ul> <li>Revisit the research object</li> </ul>	ectives and evaluate whether they have		
	been met.			
	Craft a well-rounded co	nclusion that reflects on the overall		
	research journey and its implications.			
	Approval of final draft of the	e dissertation and research article		

<ul> <li>Submit the final draft of the dissertation to the academic advisor or committee for review and approval</li> </ul>	
<ul> <li>Address any feedback or revisions requested by the advisor or</li> </ul>	
committee to ensure the dissertation meets academic	
standards.	
Simultaneously, students will prepare a research article based	
on their dissertation findings for submission to an international	
journal of high repute.	
I he article should be structured according to the journal's	
guidelines, emphasizing the novelty, significance, and	
implications of the research	
Submission of dissertation and Viva voce	
Submit the approved dissertation to the academic institution by	
the specified deadline.	
Ensure the dissertation adheres to all formatting and	
documentation requirements for final submission.	
Concurrently, students will finalize the research article based on	
their dissertation findings for submission to the international	
journal.	
Prepare for the viva voce (oral defense) examination, which	
includes defending both the dissertation and the research	
article before a panel or examiners.	
Demonstrate in-depth knowledge, critical thinking, and the     shills to extinue the end defend research findings during the end of the en	
ability to articulate and derend research findings during the viva	
voce.
